SKILLS

// Languages & Libraries

Python - PyTest, PySpark, Pandas,

Selenium

C# - Selenium, WinAppDriver

TypeScript - Playwright

DB - T-SQL (MS SQL Server), Spark

SQL, CosmosDB, MySQL

// Tools

Databricks, Snowflake, Postman,

Azure, AWS, Cypress Cloud, Git,

GitHub, Jira

EDUCATION

Bachelor's, Software Engineering

Brigham Young University - Idaho

Apr 2020 - Apr 2024

Shane Cook

QA Automation & Data Quality Leader

Hello, I'm Shane

Results-driven QA Leader with a strong foundation in automation engineering, data quality, and team leadership. Proven track record of building robust automation frameworks, streamlining testing processes, and mentoring global teams to improve quality across web, data, and backend systems. Experienced in collaborating cross-functionally with engineering, data, and product teams to drive quality in complex, high-stakes platforms. Passionate about leveraging automation and scalable processes to reduce manual effort, enhance data reliability, and deliver business-critical software with confidence.

EXPERIENCE

Software Developer Engineer in Test - BECU

May 2025 - Current | Remote

Manager, Test Engineering - Kestra Financial

Jan 2025 - Apr 2025t | Austin, TX

- Managed and mentored a team of **4 QA Engineers** across **Austin** and **India**, providing guidance on **test planning, execution, and automation best practices**.
- Partnered directly with the **Head of Data Engineering** to establish the first **comprehensive QA strategy** for the Data Engineering organization.
- Authored **master test plans** for critical data processes across **SSIS jobs, Databricks workflows, and Azure Data Factory** pipelines, creating standardized QA processes where none previously existed.
- Championed test automation by designing and implementing a **custom TypeScript Playwright framework** to support **Sitecore websites** across **Kestra Holdings' 6 companies**.
- Built **form validation automation** to ensure seamless data flow from Sitecore forms to Salesforce, improving accuracy and reducing manual QA overhead.
- Focused heavily on **mentorship and upskilling**, equipping the QA team with the technical and domain knowledge needed to support a **neglected and undocumented data ecosystem**.

QA Automation Engineer - Kestra Financial

Feb 2024 - Dec 2024 | Austin, TX

- Rotated across multiple teams (Backend Engineering, Data Engineering, and QA Automation) to provide **end-to-end quality assurance** for Kestra's Next Gen Platform.
- Designed and built a **custom Python validation tool** that automated testing for a bulk data upload process, **reducing regression testing time from 3 hours to 5 minutes**.
- Integrated the tool with an **Azure DevOps Build Pipeline**, allowing for seamless execution and real-time data validation across Azure containers and **CosmosDB**.
- Collaborated with the **Data Engineering team** to test the **migration of a critical SSIS job** that processes Rep and Branch data from FINRA, using **Python** and **PySpark** to validate data integrity across **ETL** layers.
- Architected and led the migration from **C# Selenium** to a modern **TypeScript Playwright** UI automation framework, improving test reliability and enabling seamless testing of **Shadow DOM elements** in Salesforce.
- Mentored and led a team of **4 QA Automation Engineers**, defining **automation strategy**, writing Jira tickets, conducting code reviews, and assigning tasks to support ongoing feature development.
- Delivered the first **5 end-to-end Playwright tests**, covering both the Next Gen Platform and Salesforce integration, expanding test coverage into previously untestable areas.

QA Automation Engineer Intern - Kestra Financial

June 2023 - July 2023 | Austin, TX

- Developed **14 end-to-end UI automation tests** using **Selenium (C#)**, contributing over **2000 lines of code** across new tests, test fixes, and improvements.
- Collaborated with the QA Automation team to build and optimize a suite of **300+ tests** supporting Kestra's Next Gen Platform for financial advisors.
- Assisted the QA lead in designing and implementing **3 Azure DevOps Pipelines** to partition tests into **Smoke, Regression, and End-to-End** suites.
- Improved test reliability by identifying and **resolving flaky tests** within the automation framework.
- Gained first professional experience working in an Agile environment, contributing to sprint planning, daily standups, and retrospectives.
